

Appendix D

**SCHEDULE FOR THE
DEVELOPMENT OF
TOTAL MAXIMUM DAILY LOADS
(TMDLs)
IN MONTANA**

October 27, 2000

Planning, Prevention and Assistance Division
1520 East Sixth Avenue
P.O. Box 200901
Helena, MT 59620-0901

Introduction

The Montana Department of Environmental Quality (DEQ) and the U.S. Environmental Protection Agency (EPA) have developed the following proposed schedule to develop Total Maximum Daily Loads (TMDLs) for waters on the state's 1996 list of impaired and threatened waters. A Total Maximum Daily Load is a plan to establish the maximum amount of pollutant load that can flow into a waterbody from point sources, nonpoint sources and natural background sources without exceeding state water quality standards. Montana law and federal regulations require DEQ to develop TMDLs for all waters that are not meeting water quality standards (These waters are referred to as water quality limited segments). TMDLs are required by Section 303(d) of the federal Clean Water Act and by state law. The list of waters needing TMDLs is known as a "303(d) list."

On June 21, 2000, the United States District Court of Montana ordered EPA to work with the State of Montana to develop and adopt a schedule that will result in developing all necessary TMDLs for waters on Montana's 1996 Section 303(d) list by May 5, 2007. The court further ordered EPA and the state to complete the schedule by November 1, 2000. The schedule detailed below has been developed by DEQ and EPA to meet this order and to provide a framework for future development of TMDLs on a watershed basis.

DEQ proposes to develop TMDLs on a watershed basis. DEQ has divided the state into 91 TMDL planning areas and has scheduled each area for TMDL plan development based upon groupings of similar water quality problems, land ownership, the 13 ranking criteria listed in MCA §75-5-702(7) and consideration of the priorities assigned to individual waters in the draft Year 2000 303(d) List. The proposed schedule identifies the date by which TMDLs for all listed waters within each planning area will be completed. A number of geographical units are scheduled for completion during each year with all waters on the 1996 303(d) list having TMDLs completed by 2007. DEQ has already begun collecting information on impaired waters in each of the watershed planning areas and watershed groups are in many areas developing watershed plans that address water quality, so to a certain extent TMDL development has already begun in each watershed area. The dates provided in this schedule should be viewed as completion dates for work in planning areas that has already begun or will start soon.

While the schedule addresses all waters on the 1996 list, the fact that it is based on planning areas will allow it to be used for any subsequent 303(d) list that EPA may later approve. The number of water bodies and segments to be addressed by TMDLs could change in the coming years as future 303(d) lists are improved and revised. However, the proposed format would allow DEQ to make adjustments in details of the schedule without changing the overall timeline. As provided by state law, DEQ must "provide a reasonable timeframe" for developing TMDLs for any water body added to the 303(d) list subsequent to May 5, 1997. If a water body is added to a subsequent list, DEQ will either develop a TMDL consistent with the proposed schedule for the planning area or develop an individual TMDL for the waterbody within 10 years. The decision will depend on the amount of data available for the waterbody, the complexity of the TMDL, and the time remaining on the schedule for the associated planning area.

In a related matter, the DEQ intends to finalize the Year 2000 303(d) list of impaired waters and submit it to EPA for approval by December 2000. In recognition of the court order and to avoid

conflicting schedules for TMDL development, DEQ intends to incorporate this schedule into the final Year 2000 303(d) list of impaired and threatened waters.

Schedule

Montana is using a watershed approach to schedule development of TMDLs. Montana takes the position that this approach will improve the efficiency of its program to improve water quality. The EPA encourages this approach to water resources management in order to address water quality problems comprehensively and efficiently.

The schedule organizes the state into 91 TMDL planning areas. DEQ is preparing to develop planning area or watershed-wide water quality restoration plans that address multiple TMDLs and various pollutant sources and causes of pollutant loadings in all stream segments and lakes in each planning area. Each water quality plan will contain on average 4-10 TMDLs per planning area. The date presented in the schedule for a planning area is the date by which all TMDLs will be completed in that planning area. In order to have flexibility in the schedule and to be able to respond to contingencies, DEQ may need to reschedule some watershed planning areas. However, if one area is moved back in the schedule, another will be moved forward so the number of watershed TMDLs completed each year will remain the same.

TMDL planning areas were selected to improve the pace for which TMDLs are completed. Areas of similar land use and similar water quality problems were grouped together. The priority level and ranking factors developed in the draft 2000 303(d) List were considered. Watersheds containing more high and moderate priority water bodies were generally put earlier in the schedule. A few high and moderate priority water bodies were placed later in the schedule due to their expected level of complexity or the need to gather additional information to target restoration activities.

In most cases, DEQ chooses to use planning areas established by existing watershed groups that have already begun TMDL or watershed plan development. This approach increases public support and fosters local leadership. In some of the TMDL planning areas, DEQ is not aware of existing local interest groups that might be able to assist in developing TMDLs. In those cases, DEQ will attempt to identify local partners and, if none are interested or willing, take the lead in conducting water quality assessments and developing the TMDL targets. These TMDL targets will be incorporated into watershed-wide TMDL plans developed by DEQ. DEQ will again seek support and leadership by local government and watershed groups to implement the TMDL plan once it is established.

The following Figure 1. and Table 1. identify the proposed TMDL planning areas and the year by which all TMDLs in that “watershed” are to be completed. DEQ will work closely with EPA to gain EPA’s approval of these area wide plans. A watershed group, land management agency, landowner, or other agency, including DEQ, that completes an individual waterbody TMDL within the planning area well before the identified date, has the option to have DEQ submit that plan to EPA for approval. These TMDLs will be used as models for other efforts around the state, as appropriate.

FIGURE 1: TMDL PLANNING AREAS AND COMPLETION SCHEDULE
